EDUCATION

Yonsei University, Seoul, Korea | **Mar 2023 - Present**
Candidate for Bachelor of Science in Applied Statistics and Computer Science
- GPA: 4.0/4.3

Gwacheon Foreign Language High School, Gwacheon, Korea | **Mar 2020 - Jan 2023**
Japanese Major

WORK EXPERIENCE

Leviosa AI, Seoul, Korea | **Feb 2026 - Oct 2026**
AI Engineer & Founding Member
- Built and operated an AI product-page service and Naver/Cafe24 customer-support automation; contributed across ~40 repositories, with 80%+ contribution in ~15.
- Established conventions for ADRs, architecture documentation, and README indexes across company repositories; built shared input/output and error-handling modules to standardize development across services.
- Optimized token usage and execution time for the company's highest-revenue service, reducing its API cost ratio by 70%+ and task time by 50%+.
- Fixed defects in shared payment logic across company services, restored reliable monthly recurring billing, and built safe payment canary tests.
- Built PostHog usage/error/signup dashboards and integrated CloudWatch, Lambda, and OpenSearch for log collection and search; enabled Claude/Codex-assisted log investigation.
- Improved CI/CD processing speed by 400%+ and reduced redundant builds; unified infrastructure management with Terraform and automated AWS SSM diagnostics and draft fix PRs.
- Redesigned onboarding and tutorials using drop-off and retention analysis, increasing signup rate by 200%+; built browser/mobile E2E verification loops and test harnesses.
- Contributed to Yomates backend architecture and shared error handling, and to the design and implementation of agent memory and execution harnesses.
- Shipped a shared canvas editor across multiple services, integrating AI agents via MCP and supporting AI-assisted editing, document persistence, HTML/shape conversion, and mobile touch.

Alus Healthcare Co., Ltd., Seoul, Korea | **Jun 2025 - Sep 2025**
Researcher
- Conducted data analysis for new business development and executive decision support while supporting OEM meetings, product launch preparation, brand promotion, and C-level operational tasks.
- Took over Cafe24 shopping mall development and operations after vendor inactivity, and built logistics automation.

SELECTED PROJECTS & ACTIVITIES

Yonsei University AI Club YAI, Seoul, Korea | **Jan 2025 - Present**
Research Member & Vice President (18th Cohort)
- Built YAI-HUB, used daily by 60+ members, unifying attendance, reports, member operations, recruitment, and collaborative documents with Next.js, TypeScript, FastAPI, Supabase, Yjs/Hocuspocus, and Capacitor.
- Designed traffic distribution across Cloudflare and Cloud Run, with caching and bounded database pools to accommodate frontend/backend free-tier limits.
- Automated web/iOS build and release pipelines and Notion-based error triage and bug-fix workflows; implemented monitoring, role-based access, audit logs, and backups.
- Automated 60-user attendance load tests with 3 database connections to validate resource-constrained check-in flows.
- Built a CLIP + BLIP2 text-to-image retrieval pipeline to locate video scenes from natural language queries.
- Developed a Dueling DDQN Pokemon battle agent trained on a self-developed battle simulator.
- Built web-shadow-boxing, an AI sparring partner using webcam pose estimation and GRU trajectory prediction.

NotchNote | **2026**
Founder
- Built a lightweight macOS quick-note app; attracted global users and improved features through direct communication and user feedback.

SKILLS

Languages	JavaScript, TypeScript, Python, R, C++, C#, Java, Dart
Frameworks	React, Next.js, React Native, Flutter, Node.js, FastAPI, Supabase, AWS, Docker, Terraform
AI / Data	PyTorch, TensorFlow, Qiskit, Pennylane, computer vision, reinforcement learning, data visualization
