EDUCATION

Yonsei University, Seoul, Korea **| Mar 2023 - Present**
Candidate for Bachelor of Science in Applied Statistics and Computer Science

WORK EXPERIENCE

Leviosa AI, Seoul, Korea **| Feb 2026 - Oct 2026**
AI Engineer & Founding Member

- Contributed across **~40 repositories**, with **80%+ contribution in ~15**; built and operated an AI detail-page service, custom canvas editor with AI editing and mobile touch UI, and Naver/Cafe24 CS automation.
- Redesigned onboarding and tutorials using PostHog drop-off and retention analysis, increasing signup rate by **200%+**; built browser/mobile E2E verification loops and test harnesses.
- Designed AI generation queues/workers and operated **10+ servers**; resolved deployment interruptions and concurrent-save conflicts; contributed to Yomates backend architecture, shared error handling, monitoring, and engineering conventions.
- Improved CI/CD processing speed by **400%+** and reduced redundant builds; unified infrastructure management with Terraform and automated AWS SSM diagnostics and draft fix PRs.

Alus Healthcare Co., Ltd., Seoul, Korea **| Jun 2025 - Sep 2025**
Researcher

- Conducted data analysis for new business development and executive decision support while supporting OEM meetings, product launch preparation, brand promotion, and C-level operational tasks.
- Developed and operated a Cafe24-based shopping mall after an external vendor became inactive.
- Built a logistics management automation system with React, Node.js, Supabase, and Cafe24 API integration.

SELECTED PROJECTS & ACTIVITIES

Yonsei University AI Club YAI, Seoul, Korea **| Jan 2025 - Present**
Research Member & Vice President (18th Cohort)

- Built **YAI-HUB for 60+ daily members**, unifying attendance, reports, member operations, recruitment, and collaborative documents with Next.js, TypeScript, FastAPI, Supabase, Yjs/Hocuspocus, and Capacitor.
- Designed traffic distribution across Cloudflare and Cloud Run, with caching and bounded database pools to accommodate frontend/backend free-tier limits.
- Automated **60-user** attendance load tests using **3 database connections**, with a **15-second p95** pass/fail gate.
- Automated web/iOS build and release pipelines and Notion-based error triage and bug-fix workflows; implemented monitoring, role-based access, audit logs, and backups.
- Fine-tuned EfficientFace and AdaIN models for emotion classification and style transfer workflows.
- Built a CLIP + BLIP2 text-to-image retrieval pipeline to locate video scenes from natural language queries.
- Developed a Dueling DDQN Pokemon battle agent trained on a self-developed battle simulator.
- Built web-shadow-boxing, a webcam-based AI sparring partner using pose estimation and GRU trajectory prediction.

NotchNote **| 2026**
Founder

- Built a lightweight macOS quick-note app; attracted global users and improved features through direct communication and user feedback.

SKILLS

Languages	JavaScript, TypeScript, Python, R, C++, C#, Java, Dart
Frameworks	React, Next.js, React Native, Flutter, Node.js, FastAPI, Supabase, AWS, Docker, Terraform
AI / Data	PyTorch, TensorFlow, Qiskit, Pennylane, computer vision, reinforcement learning, data visualization
